

# Air Quality Assessment for Industry

As part of the continued growth of REC, we now provide expanded Air Quality Assessment capabilities for the industrial sector. With significant experience in delivering a wide range of projects, from small biomass boilers to major international petrochemical schemes, REC are able to provide the correct scope of works and specific methodologies to suit any project and budget.

REC maintains a full range of dispersion modelling software for assessment of all types of pollution sources. The team strives to develop strong relationships with the regulatory bodies to ensure our submissions are accepted first time and avoid costly project delays and programme slippage.

As with all of REC's services, you can be sure of professional, cost effective solutions for any air quality or odour issue you may be facing. Whether in support of an Environmental Permit application or to investigate nuisance complaints, our local teams will be able to deliver a bespoke assessment tailored to your exact needs

## Services Overview

- ✓ Air Quality Assessment in support of Environmental Permits.
- ✓ Dispersion Modelling Assessments.
- ✓ Odour Assessments.
